

Add the files to the job and test the rule set

1. From the **Actions** tab, drag the **Add Input Files** action over the **Done** event of the **Rename One File** action.

The final rule set should look like the following:

2. Enable the rule set in the system environment.
3. Create a new job.
4. Add a number of PDF files to its `UserDefinedFolders` folder.
5. Change the job status to **In Prepress**. The files should be added to the job. Each should have the job name prepended to it.
