Create an APA rule to assign 1-up artworks to separated positions of the layout

1. In Job Manager, select the **Step and Repeats** view, and make note of the page position numbers in the imported layout.
2. From the **Tools** menu, select **Automated Page Assignment Editor.**
   Note that the window now contains entries for every artwork position, based on the imported layout *plus* the APA Rules established from job **XX_APA_Range**.
3. Using the Shift key, select all nine rows appearing in the APA Editor that are connected to the imported layout.
   Click **Remove**. Do not remove the three rules that you created as part of the **XX_APA_Range** job.
4. In the first row with the Red file name, change the **Position** from **1..3** to **1, 4, 7.**
5. In the second row with the Green file name, change the **Position** from **4..6** to **2, 5, 8**.
6. In the third row with the Blue file name, change the **Position** from **7..9** to **3, 6, 9**.
7. Close the APA Editor. When asked, select **Yes** to save the APA file.
8. In the Save APA File As... dialog box, click **Save** to save the file as `Job.v2.apa`.
   This file will be automatically saved to the **Control** folder located in your job folder (**XX_APA_Noncontiguous**).
