

# Prinerger Screening Tower for Packaging - system administration overview

This section gives you an overview of the Kodak Prinerger workflow management system, with a closer focus on required administrative tasks.

The main administrative tasks include:

- Helping to complete the onsite integration of the Prinerger system. (This is done with the Kodak start-up assistance (SUA) representative.)
- Performing additional installation setup
- Performing ongoing system configuration
- Performing general maintenance
- Troubleshooting problems
- Performing software updates

## Who should read this overview?

Those who are responsible for the server-client system that supports Prinerger prepress workflow management, usually system administrators.

## What else do you need for system administration?

As the system administrator for a new Prinerger system:

- You will have completed Windows 2012 Administration training.
- You must have a Prinerger system onsite that is being installed or has been installed and tested by a Kodak service representative.

## What will you know after reading this overview?

You will have a general idea of:

- The structure of the Prinerger system
- Administrative software
- The key administrative components
- The administrative tasks for different purposes
- Where to find the most up-to-date reference materials
- The escalation path for getting help with troubleshooting
