

Reference 2: Create a new smart hot folder workflow

A Smart Hot Folder workflow has three components: a ScreenSet#.xml file, a hot folder, and a smart hot folder.

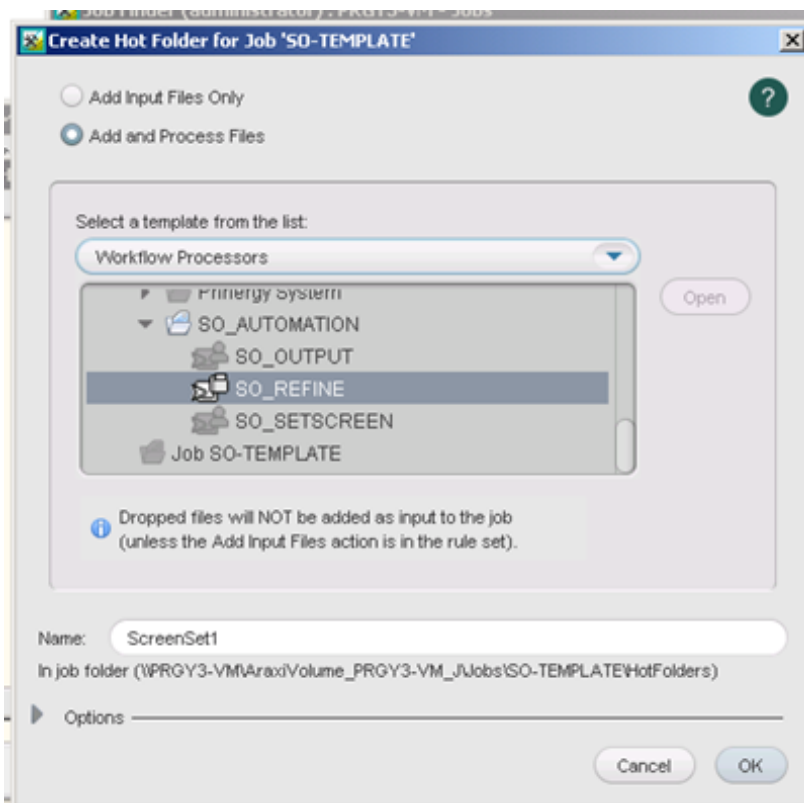

The following procedures display how to create a new automatic smart hot folder workflow. Creating a new semi-automatic smart hot folder workflow requires editing of the RBA rules.

Create ScreenSet#.xml files

1. Copy an existing ScreenSet#.xml file and rename it to the next number available.
2. Use one of the methods in the *Reference 1* section to edit the new ScreenSet#.xml file.

Create hot folders

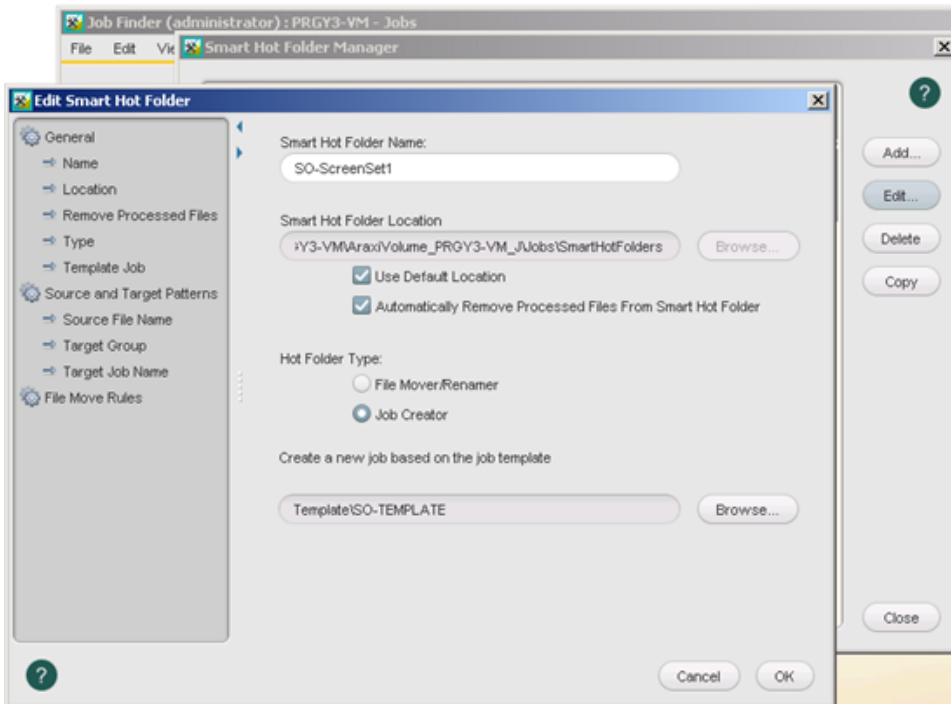

1. Open the SO-TEMPLATE job.
2. In Job Manager, from the **Job** menu, select **Manage Hot Folders**.
3. Click **Add**.
4. Select **Add and Process Files**.
5. Scroll down and then expand **Automation: Enabled Rules**.
6. Expand **All Jobs**.
7. Expand **SO_AUTOMATION**.
8. Select **SO_REFINE**.
9. In the **Name** box, type the matching ScreenSet# name.

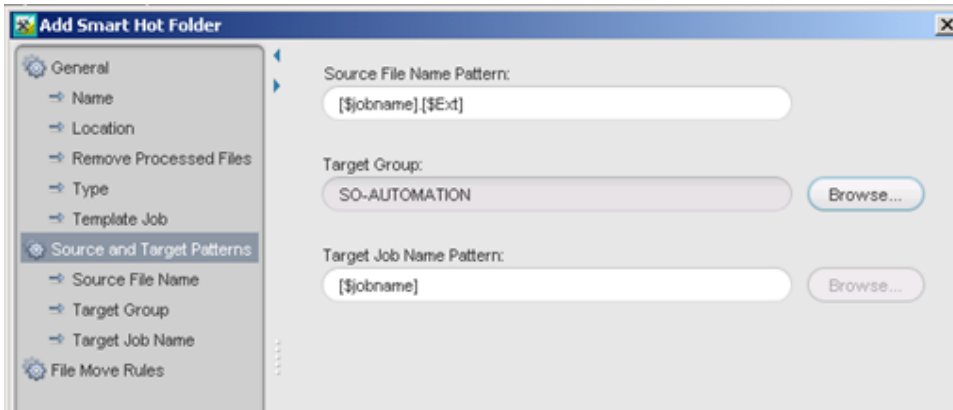

10. Click **OK**.
11. Close the Manage Hot Folders window.
12. Close the Job Manager window.

Create smart hot folders

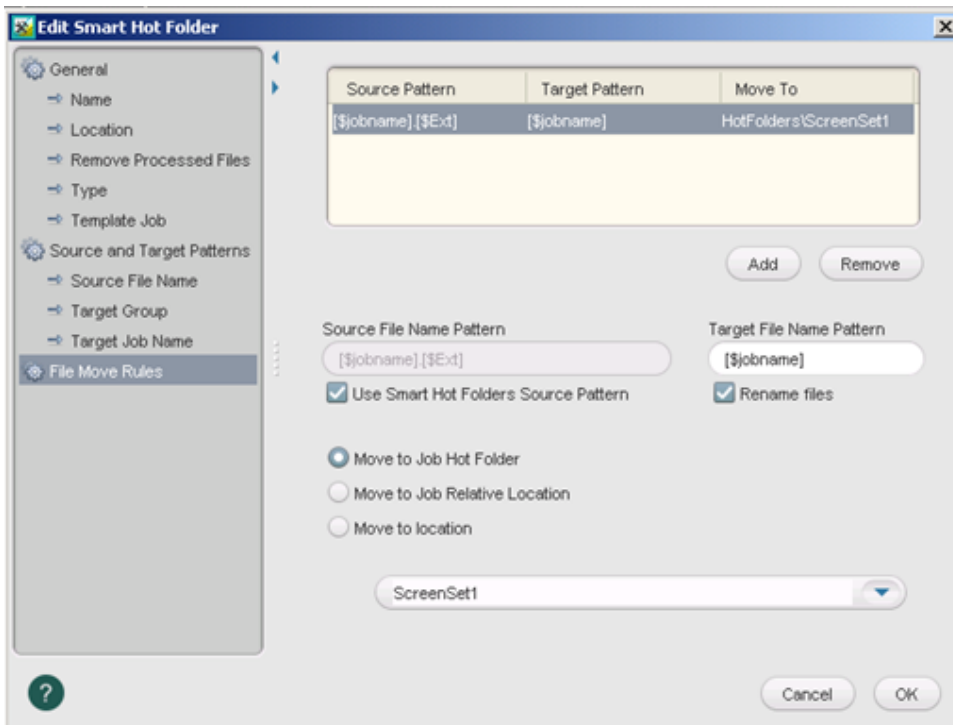

1. From the Job Finder **Tools** menu, select **Smart Hot Folder Manager**.
2. Click **Add**.
3. In the **Smart Hot Folder Name** box, enter a name that represents the workflow for your production scenario. The naming convention for the default smart hot folders is SO-ScreenSet#.
4. Select the **Use Default Location** box.
5. Select the **Automatically Remove Processed Files From Smart Hot Folder** box.
6. Under **Hot Folder Type**, select the **Job Creator** option.
7. Click **Browse**. Double-click the template group.
8. Select the SO-TEMPLATE and click **OK**.

9. On the left pane, select **Source and Target Patterns**.
10. In the **Source File Name Pattern** box, type [\$jobname] . [\$Ext]
11. For **Target Group**, click **Browse**.
12. select **SO-AUTOMATION** and click **Select**.
13. In the **Target Job Name Pattern** box, type [\$jobname]

14. On the left pane, select **File Move Rules**.
15. Click **Add**.
16. Select the **Use Smart Hot Folders Source Pattern** check box.
17. In the **Target File Name Pattern** box, type [\$jobname]
18. Select **Move to Job Hot Folder**.
19. From the list at the bottom, select the matching hot folder.

20. Click **OK**.
21. Close the Smart Hot Folder Manager.
