

Job Layout Output Summary (ganged jobs)

This report lists the contributing jobs that were ganged together in a single Prinergy job, with percentage of material (media) consumed by each. It lists the plates that were output and gives detailed information about each layout and separation in the job.

The generated report contains the following types of information:

- Ganged job name and creation date
- Per contributing job in this ganged job: job name, material, and media percentage consumed
- Surfaces output: Layout ID
- Surfaces output per contributing job: signature and sheet number, surface, operation, creation date and time, device name, media, job name, media percentage
- Separations output: Layout ID
- Separations output per color and contributing job: signature and sheet number, surface, operation, creation date and time, device name, media, separation color, job name, media percentage

To generate the report:

1. Select a job. To narrow down the job list, click **Search** and type part of a job name followed by an asterisk (*).
2. Click **pdf** or **html**.
