Connecting to the Business Link server

Use the **Configuration** tab to set up communication between the Administration Client and the Business Link server, and to specify your language and measurement preferences.

1. In the Administration Client, click the **Configuration** tab.
2. Click the **Business Link Administration Client** triangle to expand the pane, and select the language and measurement units to use.
   The changes are applied immediately.
3. Accept the default host name, or, if you are configuring remotely, specify the IP address of the remote Business Link server.
4. Click **Connect**.
5. On the **Status** tab, restart the connectors either now or when you finish setting up the **Configuration** tab.
   - If a connector is currently stopped, click **Start**.
   - If the connectors are currently running, click **Stop**, and then click **Start**.
6. Click **Refresh**.
7. On the **Status** tab, verify that the Business Link Server triangle is green.

Be sure to configure the e-mail notifications that inform you of any system problems.
