## **Creating a Descreen hot folder**

This hot folder removes the halftone screening data from an incoming screened 1-bit TIFF file and converts this file into a continuous-tone 8-bit TIFF file.

**Note**: To specify whether a descreened file outputs as CMYK TIFF or PDF with all spot channels, go to **Edit > Preferences > Descreen**.

General steps for creating a hot folder

- 1. Select **Tools > Hot Folder Setup**.
- 2. In the Hot Folder Setup dialog box, click 🛨.
- 3. Type a name for the hot folder in the **Hot Folders** list, and click anywhere in the dialog box.
- 4. In the **Input folder** box, click **Select**, locate and select the desired folder (if needed, click **Select**.
- 5. To define an output folder for the output TIFF file, click **Select** in the Output folder box, select an output folder, and click **Select**.
- 6. To delete the input files after the output file is created, select the **Delete input files after output** check box.

Setting up the Descreen hot folder

- 1. In the Hot folder type list, select Descreen.
- 2. Set the hot folder options as needed.
- 3. Click Save.

## Hot folder options for Descreen

Option	Setting	Notes
