Testing after upgrading the main (and standby) enterprise servers

1. Log on via the Enterprise URL.
2. Open a few jobs that are associated with several different satellites and upload some files.
3. On the **Pages** tab, open a page in Smart Review, and close it.
4. Request approval:
    a. On the **Pages** tab, select one or more pages, and click **Request Approval**.
    b. Select one or more users, and request review and/or final approval.
    c. Confirm that an e-mail notification message was sent to the users that you selected.
5. Download a PDF proof:
    a. On the **Pages** tab, select a page.
    b. Click **Download Proof**.
    c. Download the page to a known location.
    d. Using Windows Explorer or **Finder** on the Mac, locate and open the downloaded low-resolution PDF proof.

Enable the antivirus software on the Main (and Standby) Enterprise servers ,if you had disabled it at the beginning of this upgrade process.
